

ALIGN eCARE

Agentic Clinical Execution Layer for Canadian Healthcare

Align eCare takes care of the paperwork so physicians can focus on patient time.

The System Is Not Short on Doctors

Canada is losing clinical capacity to administrative work. Time exists but is trapped.

- Millions of hours lost annually
- Physicians spend more time on paperwork than patients
- Waitlists grow despite existing capacity

The Work That Never Gets Finished

The breakdown happens after the visit. Tasks scatter and stall.

- Prescriptions
- Referrals
- Forms
- Billing
- Follow-ups

The Prescription Loop

Prescriptions create repeated administrative cycles.

- Send
- Return
- Correct

- Resend

Why Existing Tools Fall Short

Documentation tools assist writing but do not complete work.

- Hallucinations require review
- Note bloat hides signal
- Copy-paste fatigue
- Admin still remains

The Align eCare Approach

Align orchestrates existing systems instead of replacing them.

- Fax becomes digital and trackable
- One interface
- No new logins

Smart Prescriptions

Issues are resolved before interruption.

- Interaction checks
- Dosing validation
- Patient context
- Structured attestation

Execution System

Align completes tasks end-to-end.

- DTC forms
- Employment letters
- Referrals
- Validated prescriptions
- Billing prep

Unattached Patients

Align acts as a temporary continuity layer.

- Receives labs
- Routes updates
- Tracks follow-ups

Auditability and Compliance

Every action is traceable.

- Who, what, when, where, why
- PIPEDA and PHIPA aligned
- Canadian data residency

Revenue and Monitoring

Align expands clinical and financial value.

- Billing code capture
- KardiaMobile and home monitoring
- Early detection
- Reduced hospitalizations

Why We Stand Out

Align completes work and eliminates loops.

- Execution over documentation
- Seamless integration
- Full auditability

We don't mean to toot our own horn, but the system speaks for itself.
